Kokkirigada Sudeep	22A21A6147

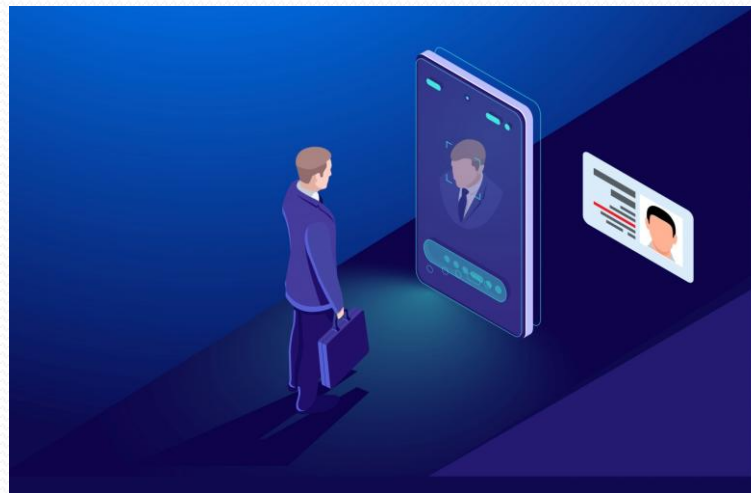

Under the guidance of Mr. G Lakshmi Narayana

ABSTRACT

This project presents a Smart Interview Question Generator using Generative AI and skill-based analysis to provide personalized interview preparation. By analyzing a user's skills, domain preferences, and experience level, the system dynamically generates relevant interview questions. Unlike static question banks, the proposed system adapts to user performance and simulates a real interview environment, helping candidates improve technical knowledge, communication skills, and confidence. The platform is designed to support students, fresh graduates, and job seekers in continuous interview practice and self-evaluation.

PROBLEM STATEMENT

- Lack of a smart and personalized interview practice system.
- Students do not get questions based on their skills and domain.
- Absence of real interview-like practice .
- support to improve confidence and communication skills- Manual preparation.

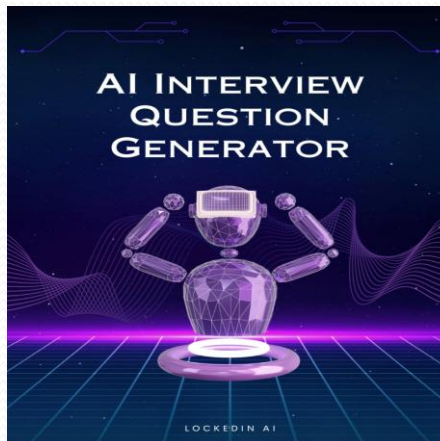

EXISTING SYSTEM

- Lack of a smart and personalized interview practice system.
- Students do not get questions based on their skills and domain.
- No proper platform to evaluate interview readiness.
- Absence of real interview like practice environment.

PROPOSED SYSTEM

- Generates personalized questions based on user skills and domain.
- Provides real-time interview-like experience.
- Supports adaptive difficulty based on user performance.
- Helps users improve technical skills, communication, and confidence.

Technologies

- Backend: Python ,Django
- Frontend: HTML ,CSS ,Javascript
- AL & ML: Speech-to-text API
GenAI(question generation & evaluation)

Thank You

- Thank you for your time.
- We are happy to answer your questions.
